

Class A and Class B First Aid Kits

In 2015, the American National Standards Institute (ANSI) and the International Safety Equipment Association (ISEA) updated the standards ANSI/ISEA Z308.1—2015, Workplace First Aid Kits and Supplies. Classification of first aid kits, designating the assortment of items and quantity of each item, is based on the anticipated number of users intended to be served by each first aid kit, as well as the complexity of the work environment and level of hazards. The updated standard, effective in 2016, introduced two classes of first-aid kits: Class A kits, with contents designed for the most common types of workplace injuries, and Class B kits, which are designed for more complex injuries or for use in high-risk environments. Both kits must be completely stocked and accessible at Recreation Camps in Massachusetts.
